EDUCATION

- BE In Computer Engineering from AISSMS College of Engineering, July 2023

CERTIFICATIONS

- Udemy – Java Spring Framework 6 with Spring Boot 3 | Dec 2024
- CIIT, Pune – Java Full Stack Development Training | Sep 2022

CORE COMPETENCIES

- Java 8
- Spring Boot (incl. Spring Web, Spring Data JPA, Spring WebFlux)
- RESTful API Development
- Microservices Architecture
- Apache Kafka
- PostgreSQL / MySQL
- AWS EC2 & AWS RDS
- Git (Version Control)
- Resilience4j (Circuit Breaker)
- Eureka Server (Service Discovery)
- SQL Query Optimization
- CRUD Operations / Backend Development
- Swagger (API Documentation)
- Postman (API Testing)
- Role-Based Access Control (RBAC)
- React.js / Next.js
- JavaScript, Ajax, jQuery
- HTML5, CSS3, Bootstrap
- Modular & Scalable Service Design
- UML Design (PlantUML)
- Agile / Scrum Methodology Exposure

PROFILE

- Software Engineer at First Quad Tech Solutions with hands-on experience in building scalable microservices-based applications using Java, Spring Boot, and RESTful APIs.
- Proven track record in designing and integrating high-performance backend systems, leveraging technologies such as Spring WebFlux, Spring Data JPA, and Eureka Server for service discovery. Skilled in API documentation using Swagger, ensuring smooth cross-team communication and rapid onboarding.
- Adept at conducting thorough API testing with Postman and implementing resilient system designs using Resilience4j to meet modern enterprise demands.
- Proficient in cloud deployment using AWS EC2 and RDS, with a strong foundation in modular service design, SQL query optimization, and secure data persistence.
- Well-versed in collaborative development using Git and Agile methodologies. Experienced in working with PostgreSQL/MySQL, RBAC implementation, and frontend technologies like React.js, Next.js, and Bootstrap for full-stack development.
- Committed to continuous learning and performance tuning, with a focus on delivering robust, maintainable, and scalable software solutions.

EXPERIENCE

Software Engineer

First Quad Tech Solutions | Nov 11, 2024 – Till Present

Roles & Responsibilities -

- Developed and integrated RESTful APIs using Spring Boot and WebClient to ensure seamless communication between distributed systems, contributing to high-performing and scalable enterprise applications.
- Utilized Spring Data JPA for efficient database interactions, implementing secure and optimized data persistence layers aligned with application requirements and business logic.
- Generated and maintained interactive API documentation using Swagger, enhancing cross-team collaboration, onboarding speed, and reducing development time through clear interface specifications.
- Executed extensive API testing using Postman to validate endpoint reliability, monitor performance, and swiftly resolve defects, resulting in improved stability and reduced bugs in production.
- Translated business requirements into technical solutions, collaborating closely with product owners and senior developers to ensure functional accuracy and timely project delivery.
- Participated in system deployment and performance tuning, optimizing complex SQL queries and improving API response time to enhance application efficiency and user experience.
- Explored and implemented microservices architecture concepts, focusing on service decoupling, scalability, and fault tolerance to meet modern enterprise software demands.
- Engaged in version control and collaborative development workflows using Git, including branching strategies, pull requests, and code reviews to ensure clean, maintainable, and well-documented codebases.
- Monitored and resolved production issues, proactively identifying system bottlenecks and implementing fixes to ensure minimal downtime and uninterrupted business operations.
- Contributed to team knowledge-sharing sessions, continuously learning and discussing best practices in Java, Spring Boot, API security, and microservices architecture to foster a culture of continuous improvement.

Java Developer Intern

First Quad Tech Solutions | June 5, 2024 – November 5, 2024

Roles & Responsibilities -

- Designed, implemented, and optimized robust backend services leveraging Java and Spring Boot, focusing on modularity, maintainability, and scalability to meet evolving business requirements.
- Independently engineered a microservices project using Spring Boot, RESTful APIs, and Eureka Server for dynamic service discovery, enhancing understanding of service orchestration and distributed system patterns.
- Deployed Java-based applications on AWS EC2 instances and utilized AWS RDS for managing production-grade relational databases, gaining hands-on experience in cloud infrastructure and deployment pipelines.
- Gained practical exposure to building and maintaining communication between loosely coupled services using RESTful protocols and registry services, ensuring reliability and fault tolerance across the system.
- Adopted best practices in API design and backend engineering to create systems that deliver high performance under load, emphasizing clean architecture principles and efficient data flow handling.
- Worked in a cross-functional Agile team, participating in daily stand-ups, sprint planning, and code reviews, contributing to a collaborative development process and continuous improvement of code quality.

PROJECTS

Project Title: Society Maintenance & Management Application

Tech Stack: Java, Spring Boot, Next.js, PostgreSQL, RESTful APIs

Key Skillset: Full Stack Development, Role-Based Access Control (RBAC), Transactional Handling, Modular Architecture

Project Summary:-

Developed a robust and centralized web-based application to streamline housing society operations. The platform enabled seamless management of flats, residents, expenses, and maintenance activities. Designed tailored role-based dashboards and access layers to cater to Superadmin, Admin, Committee Members, and Resident Members, ensuring secure and intuitive interactions. Integrated real-time email notifications, secure login, and custom validations for high reliability. The backend ensured transactional integrity using Spring Boot, while a responsive front end was built using Next.js.

Key Roles and Responsibilities-

- Built RESTful APIs using Spring Boot and developed interactive frontend interfaces using Next.js for all user roles.
- Architected PostgreSQL schema with RBAC logic, ensuring secure data separation and integrity for each role.
- Implemented user verification, instant email alerts, and role-based dashboards for flats, dues, payments, and approvals.

Project Title: Company Rating Application

Tech Stack: Java, Spring Boot, Microservices, Eureka Server, React, PostgreSQL, Swagger, RESTful APIs

Key Skillset: Microservices Architecture, API Development, Service Discovery, Frontend Integration, System Scalability

Project Summary:-

Engineered during an internship at First Quad Tech Solutions, this application enables users to rate and review companies based on their experiences. Built on a scalable microservices architecture using Spring Boot and Eureka Server for service discovery, the application ensures efficient inter-service communication. The frontend, developed using React, delivers a dynamic and user-friendly interface. Backend services were modular and optimized for high performance, integrated with PostgreSQL for reliable data persistence and Swagger for seamless API documentation.

Key Roles and Responsibilities-

- Created modular, loosely coupled backend services using Spring Boot and facilitated inter-service communication using WebClient.
- Developed an intuitive UI in React and integrated real-time rating and review components for user interaction.
- Built and exposed secure RESTful APIs, employing Swagger for easy testing and documentation of service endpoints.

Project Title: Online Student Exam Portal

Tech Stack: Java, Spring Boot, SQL, REST API, HTML, Bootstrap, Ajax

Key Skillset: Backend Development, API Integration, Dynamic UI, CRUD Operations, Academic Data Management

Project Summary:-

Developed a web-based examination system to streamline student assessments and academic content management. The platform included robust CRUD operations for managing students, subjects, instructional materials, and question banks. The backend, powered by Spring Boot and SQL, ensured secure and efficient data processing. The frontend employed HTML, Bootstrap, and jQuery with Ajax to deliver a responsive and interactive user experience, enabling real-time content updates without full-page reloads.

Key Roles and Responsibilities-

- Created REST APIs using Spring Boot for managing student records, subjects, and exam content.
- Implemented dynamic UI using HTML, Bootstrap, jQuery, and Ajax to enhance responsiveness and user interaction.
- Enabled smooth administration of examination content and real-time data updates, reducing manual intervention.
