WORK EXPERIENCE

Software Engineer

First Quad Tech Solutions – Pune
Nov 2024 – Present

- Designed and integrated RESTful APIs and backend workflows for the Society Maintenance App using Spring Boot and PostgreSQL.
- Utilized Caffeine caching to improve performance by 30%.
- Integrated AWS RDS database to ensure data consistency and seamless collaboration across the team.
- Automated key processes using CRON expressions, improving system efficiency and reducing manual overhead.
- Enhanced code quality through unit testing, SonarQube static analysis, and API testing/documentation using Swagger and Postman.
- Deployed and managed the application on AWS EC2, optimizing performance and reliability.
- Collaborated in an Agile environment, tracked sprint progress, and coordinated across teams to improve delivery quality and reduce integration issues.

Java Developer Intern

First Quad Tech Solutions – Pune
Jun 2024 – Nov 2024

- Applied Spring Boot and Microservices architecture to develop a Company Rating Application using Java, Eureka Server, PostgreSQL, and Angular.
- Built modular backend services and RESTful APIs; documented endpoints with Swagger.
- Implemented inter-service communication using RestTemplate and WebClient to enhance system scalability and reliability.
- Integrated frontend components for real-time user ratings and reviews.
- Gained hands-on expertise in microservices architecture, API development, and system scalability.

SKILLS

- Core:** Java 8, Java 17, Collections Framework, Multithreading, Exception Handling, Object-Oriented Programming (OOP)
- Frameworks & Libraries:** Spring Framework, Spring Boot, Spring MVC, Spring Data JPA, Resilience4j, JWT
- Microservices & Messaging:** REST APIs, Eureka Server, Spring Cloud Config, API Gateway, WebClient, RestTemplate, Apache Kafka
- Databases:** PostgreSQL, MySQL, SQL, DBeaver, pgAdmin, RDBMS Management
- DevOps & Cloud:** Git, GitHub, Bitbucket, Docker, Kubernetes, DockerHub, Jenkins CI/CD Pipeline, AWS (EC2, IAM, RDS), Ansible, Cloud Deployment
- Testing & Tools:** Postman, Swagger, MobaXterm, Maven, UML (PlantUML)
- Methodologies & Practices:** Agile, SDLC, Clean Architecture, SOLID Principles, Unit Testing

SUMMARY

Java Backend Developer with 1 year of experience focused on designing and developing scalable RESTful APIs and Microservices using Spring Boot. Strong skills in database management with PostgreSQL and MySQL, along with application deployment on AWS using Docker. Dedicated to creating reliable and high-quality software systems.

EDUCATION

AISSMS College of Engineering

Bachelor of Engineering , Jul 2023

CERTIFICATIONS

- Master Microservices with Spring Boot, Docker, Kubernetes, Udemy – Nov 2025
- Java Spring Framework 6 with Spring Boot 3, Udemy Dec 2024
- Java Full Stack Development Training, CIIT Training Institute, Pune

PROJECTS

Paymaster– Automated Payroll System (First Quad Tech Solutions)

Problem: The monthly payroll procedure was manual, slow, and prone to calculation errors.

Solution: Developed an automated payroll backend using Spring Boot and PostgreSQL, containerized it with Docker, and deployed it using Ansible Playbooks with securely managed secrets. Implemented scheduled payroll processing and automated salary slip generation with secure email delivery.

Outcome: Reduced payroll processing time by 70%, eliminated manual errors, and increased operational reliability.

Company Rating Application – Microservices Architecture

Problem: The monolithic system was difficult to scale, slow to update, and hard to maintain.

Solution: Built the application using independent Spring Boot microservices, integrating Eureka Server for service discovery, an API Gateway for routing, WebClient for inter-service communication, and PostgreSQL for reliable data handling.

Outcome: Enhanced scalability and modular deployments by approximately 70%, leading to faster response times, improved performance, and smoother maintenance.
